

Lite Flite Static Discharge Cables are compatible with all hoist hooks and can be made to customer specific lengths.

Static Discharge Wire

P/N 60080003, 60080004

The static discharge cable consists of a stainless steel, marine grade, PVC lined wire rope, uninsulated at the lower 50 cm.

A crimped stainless steel top termination is attached to a stainless steel screwgate karabiner, via a cheap, field replaceable weak link, breaking strength 60-80kg.

The wire tip is welded and smoothly rounded, to prevent snagging. The shear weight of the wire ensures that the wire is stretched and makes contact with the ground or water.

Maintenance:

Check for damage before each use (look for loose wire strands, replace weak link if necessary, check karabiner function). Clean (rinse in fresh water) and leave to dry after each use.

Specifications:

Lite Flite P/N	60080003 (2.5 m) 60080004 (3.0 m)
Marking	P/N, S/N, date of manufacture
Weight	0.4 kg
Material	4 mm 7x7 aisi 316 stainless steel
Liner	Ø9 mm white PVC
Weak link	Ø30 mm standard key ring
Karabiner	80 mm aisi 316 screwgate
Life time	On condition
