

Gunners Belt

P/N 600816xx series

Gunners belts, also known as monkey belts or body positioning systems, are designed to keep the user secured inside the helicopter during open door operations. As such, a gunners belt is a vital piece of Personal Protection Equipment.

Lite Flite gunners belts come in multiple configurations, all built from the same basic construction. A wide, reinforced lumbar support with fixed lanyard or a tang/d-ring combination for attaching a removable lanyard.

The lanyard is equipped with a length adjuster that does not loosen due to vibrations and wind blast. For added security, the adjustable front piece of the belt can be equipped with dual click lock buckles.

Specifications

- Waist width adjustable 60 to 150 cm
- One or two click-lock buckle closure
- Fixed or removable adjustable lanyard
- Low profile karabiner fits most hard points
